Third year collection: 'Lost world'

My collection is set in a post world war distopian future, which focuses on the lifestyle of humans surviving in these tough conditions. The world is a wasteland full of makeshift shelters, deconstructed buildings and rubbish. The humans who are left deserted on earth need to find inventive ways to stay alive using resources left. Inventiveness and individuality are important aspects to staying alive. Protective, transformable, modular garments are at the forefront of design, for functionality and protection purposes.

This concept resonates with current wars happening in the world today. I intend to create garments which aid humans in these struggling environments.

Concept: 'Lost World'

Deconstructed architecture

Gordon Matta Clark

Makeshift shelters

Look 1: shape and sculpture development

Look 2: transformable & modular garment development

Look 2 & 3: Process of design into construct

Environment & muse

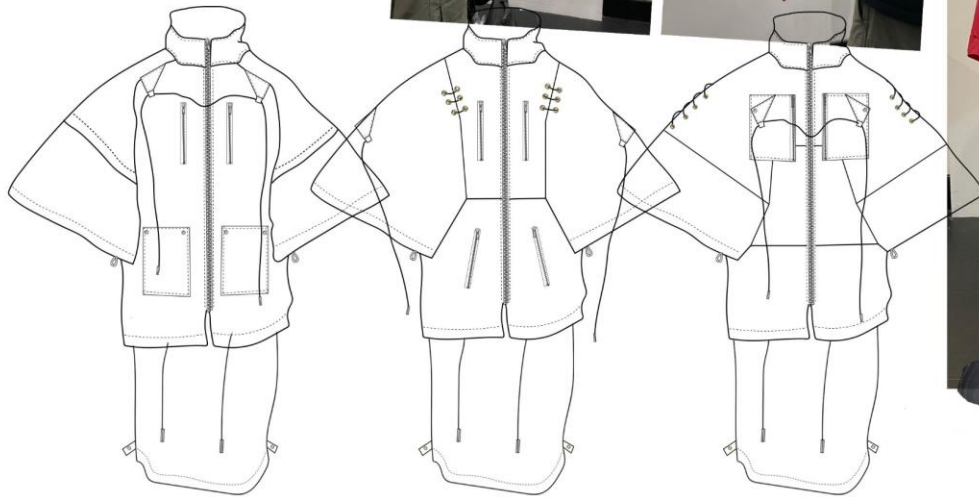

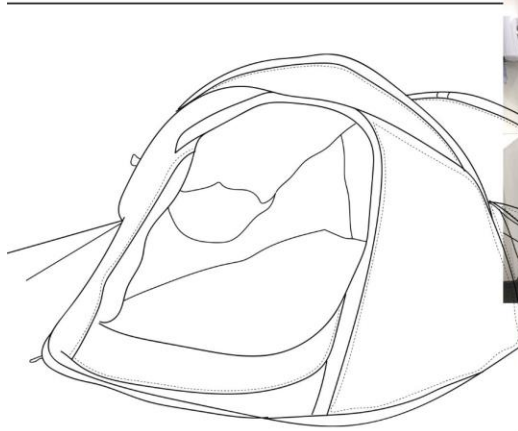

Look 3: Details and function research

Look 4: Developing hood shape through research

Look 4: developing a wearable sculpture

Look 1

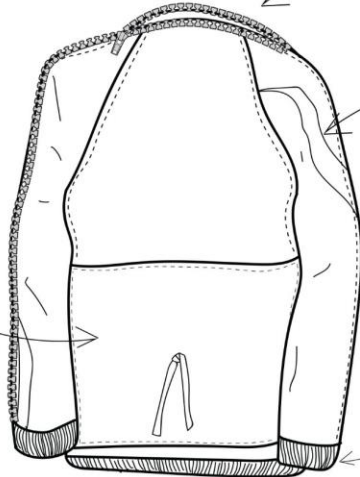

Continuous zip from neckline to bottom of sleeve

Pole guide from tent redeveloped into a design feature

- Tent ventilation constructed middle of shirt
- Blue mesh
